Bonding and Attachment in Maltreated Children

Consequences of Emotional Neglect in Childhood. The most important property of humankind is the capacity to form and maintain relationships. These relationships are absolutely necessary for any of us to survive, learn, work, love and procreate.

The Center on the Developing Child at Harvard University was founded in 2006 on the belief that the vitality and sustainability of any society depend on the extent to which it expands opportunities early in life for all children to achieve their full potential and engage in responsible and productive citizenship. We view healthy child development as the foundation of economic prosperity, strong communities, and a just society, and our mission is to advance that vision by using science to enhance child well-being through innovations in policy and practice.
